

Virtual Commissioning

Case Study: Church

The customized, no-cost Virtual Commissioning Program™ (VCx™) helped this church save **447,000 kWh** and **\$44,700** on their annual energy bill!

447,000 kWh
in annual energy savings

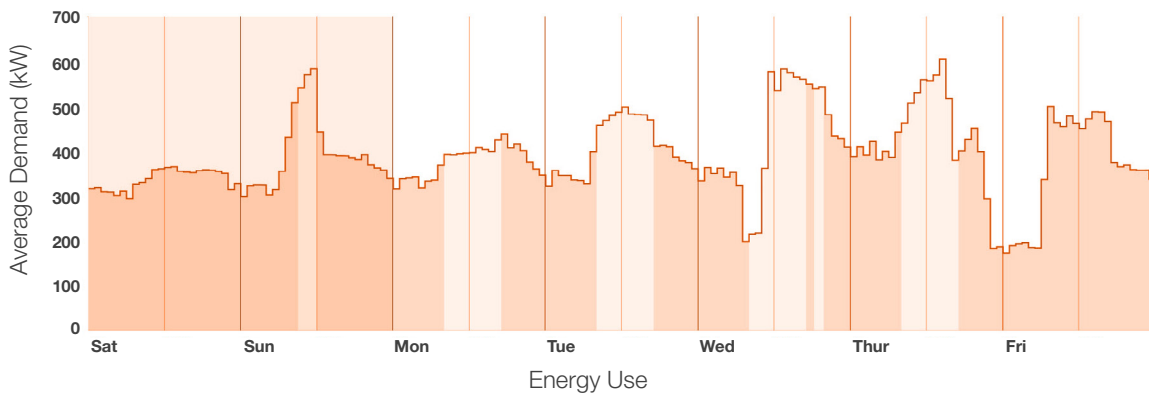

\$44,700
in avoided annual energy costs

331 tons
of emissions avoided

Pre-Engagement: Evaluating the Site

An Energy Advisor's initial review of the church's energy data revealed consistently high overnight energy use when the building was vacant.

Post-Implementation: Creating Energy Savings

Recommendations included lowering overnight temperature setpoints to minimize energy use during unoccupied hours and aligning HVAC schedules closely with the building's operating hours.
