

# Virtual Commissioning (VCx) Program

The VCx Program is a complimentary service for non-residential customers offered by JCP&L's Energy Solutions for Business Program. A trained Energy Advisor remotely analyzes your building energy data with no on-site visits necessary. Participation is fast and easy with no eligible equipment criteria, fees, or enrollment paperwork. Since 2020, VCx participants reduced their energy usage by an average of 15%.

## How it Works

- ✓ **Utility Meter Data Analysis:** A remote analysis provides insight into energy usage at your facility to identify unexpected and wasted usage.
- ✓ **Personalized Recommendations:** Through ongoing guidance, a trained Energy Advisor will provide recommendations for your facility that are easy to implement and are low or no cost to you. This includes real-time evaluation of energy efficiency improvements bundled with whole-building strategies.
- ✓ **Virtually Delivered:** No on-site visits or in-person audits required. Your Energy Advisor communicates with you virtually and remotely, by email or phone.
- ✓ **Measured Results:** See the impact of your implemented adjustments. Your dedicated Energy Advisor will measure and verify your energy savings impact.

## Customer Benefits

Provides custom recommendations based on insights from your meter data, typically reducing participant energy usage by **15%.\***

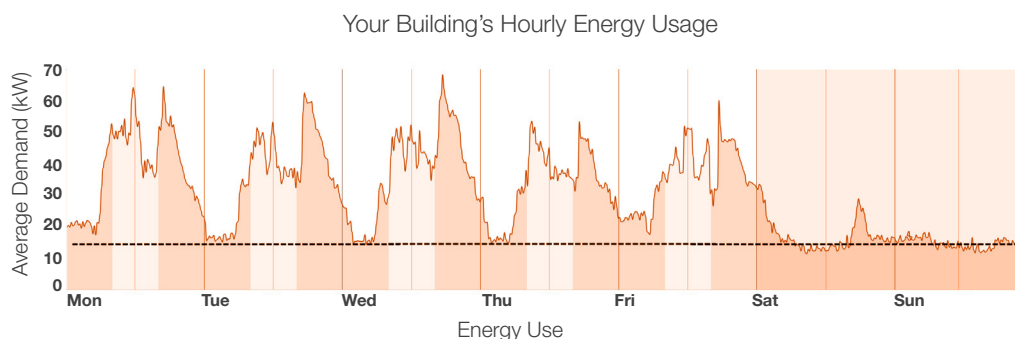

Solutions and recommendations are simple and no-cost to you, focused on optimizing your existing facility's equipment.

## What to Expect

- ✓ **Virtual Engagement:** If the remote analysis of your meter data confirms that you may benefit from the VCx program, an Energy Advisor will contact you to further discuss and offer assistance, providing recommendations based on your facility's unique energy usage and your business's priorities. They will share data on your facility's energy usage to support their recommendations.
- ✓ **Common Recommendations:**  
This service will help identify energy-saving actions you can take such as:
  1. Optimize equipment schedules
  2. Manage equipment start-up and shut-down schedules
  3. Identify equipment setbacks to address unnecessary usage

For more information about the VCx® program, please contact the administrator at [enroll@powertakeoff.com](mailto:enroll@powertakeoff.com) or visit their website at [www.powertakeoff.com](http://www.powertakeoff.com).
